Full-stack Software Engineer

Description

This is one of a few brand new roles with an exciting and genuinely unique technology start-up company in Cheltenham. They are looking secure a Senior/Lead Software Engineer to take ownership of the development of the in-house OS (apps, tools, dashboards, communications pipelines etc) along with the development of a functional (but attractive!) UI.

The company develop telecommunications and monitoring devices for harsh environments across the globe.

The role involves predominantly greenfield development with very little (if any!) supervision so it's vital that you're able to work independently, problem solve and take complete ownership of the software development projects.

ROLE: **Full-stack Software Engineer**

LOCATION: **Cheltenham (with flexibility)**

SALARY: ~ **£90,000**

Responsibilities

Essential skills for the full-stack Software Engineer are:

- Python & JavaScript expertise
- Fluency in either Java / Go / Rust / Elixir
- Knowledge of data privacy and secure data storage
- GIS or Geospatial systems
- Building SW projects from scratch with experience across full development lifecycle

Due to the start-up / idea sharing nature of the company, you'll be required on-site predominantly for this role. However, some remote working can be offered for days of coding etc.

Contacts

If you're interested in the role, please apply below or get in touch with any questions

Cheers,

Nathan
